Abstract of JP2003062436

PROBLEM TO BE SOLVED: To manufacture a large-sized hollow fiber membrane module having a large membrane area by potting molding without generating the non-penetration of a resin between membranes, the crack of a bonded and fixed part or the non-uniformity of the interface of the fixed part.
SOLUTION: In the method for manufacturing the hollow fiber membrane module by housing a hollow fiber membrane bundle in a case and bonding and fixing at least the single end of the case by a resin using a potting container, the resin is injected in a plurality of the injection holes provided to the potting container by applying tournament piping to the injection holes to perform potting molding.
